

QNH Budget Management System

Executive Summary

QNH Budget Management System is a hospital finance governance platform that manages the budgeting lifecycle from annual planning through approval, transfer control, procurement linkage, budget consumption tracking, analytics, reporting, and audit visibility.

The system exists because hospital budgeting requires more than collecting numbers. Finance leadership needs controlled workflows, clear accountability, reliable approval evidence, procurement visibility, and timely insight into financial risk. Department leaders need a structured way to prepare budgets, respond to feedback, and understand the status of their requests. Approvers need enough context to judge whether a request is reasonable before approving it.

Before this system, budgeting could depend heavily on spreadsheets, manual follow-up, email-based feedback, and disconnected procurement records. That made it difficult to know which budgets were pending, why items were returned, how purchase orders consumed approved budgets, whether prices were reasonable, and whether financial year closure risks remained unresolved.

The system addresses these challenges through a controlled digital process:

Key capabilities include:

Capability	Executive Value
Financial Year Governance	Defines when budgets can be planned, reviewed, prepared for closure, and closed.
Budget Creation	Standardizes department budget planning using approved categories and item types.
Budget Approval	Provides structured review, approval, and return workflows.

Capability	Executive Value
Return & Feedback	Creates a controlled correction cycle with documented approver feedback.
Budget Transfers	Allows controlled movement of approved budget value between items.
PO Linking	Connects procurement usage to approved budget items.
Budget Consumption Tracking	Shows approved, consumed, and remaining budget value.
PO Item Mapping	Connects budget item types with historical procurement item codes.
Price Intelligence	Compares proposed unit prices against historical procurement benchmarks.
Dashboards & Analytics	Gives role-based visibility into budget status, workload, risks, and trends.
Audit & Permissions	Enforces accountability, segregation of duties, and traceable decisions.

The most important executive outcome is not automation alone. It is stronger financial governance. The system improves the quality of budget decisions by making the process visible, controlled, explainable, and auditable.

For the CFO, the system provides:

- Clear visibility into where budgets are in the approval lifecycle.
- Better evidence for approving, returning, or challenging budget requests.
- Stronger control over budget transfers and procurement consumption.
- Historical price benchmarks to identify potential overspend before approval.
- Audit-ready records of who acted, when, and why.
- A foundation for future enhancements such as projects, vendor visibility, advanced reporting, smart analytics filters, and executive intelligence.

The system should be viewed as a financial control platform for hospital budgeting: it strengthens planning discipline, approval quality, procurement transparency, and executive oversight.

1. Business Challenges

Hospital budgeting involves many stakeholders, multiple departments, annual financial controls, approval rules, procurement activity, and audit expectations. Without a controlled system, these activities can become fragmented.

Key Challenges

Challenge	Business Impact
Manual budget preparation	Inconsistent formats, repeated follow-up, and limited visibility.
Unclear approval status	Departments and Finance may not know where action is required.
Informal feedback loops	Return reasons can be lost or handled outside the official process.
Limited price context	Approvers may not know whether requested unit prices are reasonable.

Challenge	Business Impact
Weak procurement linkage	Purchase orders may not clearly show their budget impact.
Limited consumption visibility	Approved, consumed, and remaining balances can be difficult to track.
Audit difficulty	Evidence may be scattered across emails, spreadsheets, and manual records.
Closure risk	Unresolved transfers or PO links may delay financial year closure.

Before / After Comparison

Area	Before	With QNH Budget Management System
Budget Planning	Manual and fragmented	Structured by financial year, department, category, and item type
Approval Review	Dependent on manual context	Central queue with item details, feedback, and benchmarks
Returned Budgets	Informal feedback	Documented return reasons and resubmission flow
Transfers	Difficult to govern consistently	Request, approval, and balance impact are controlled
Procurement Linkage	PO usage may be disconnected	PO links connect procurement activity to budget items
Price Review	Limited historical context	Historical procurement benchmarks support decisions
Dashboards	Manual status tracking	Role-based workload and status visibility
Audit	Dispersed evidence	Central action history and traceability

2. System Overview

Purpose

The purpose of QNH Budget Management System is to provide one controlled workspace for hospital budget planning, approval, budget consumption, procurement linkage, reporting, and governance.

Scope

The system covers the main budgeting lifecycle:

Core Capabilities

Capability	Purpose
Financial Years	Establish and control the annual budget period.
Budget Creation	Allow departments to prepare budget requests.
Budget Approval	Enable Finance review, approval, and return.
Return Feedback	Document required corrections and explanations.
Budget Transfers	Move approved budget between items under approval control.
PO Linking	Link purchase orders to approved budget items.
PO Item Mapping	Connect budget items to procurement history.
Price Intelligence	Benchmark proposed unit prices against historical purchases.
Analytics	Compare budgets, departments, categories, and trends.
Dashboards	Provide role-based visibility and action queues.
Notifications	Notify users when action is required.
Permissions	Enforce who can view, edit, approve, and administer.
Audit Logs	Preserve evidence of key actions and decisions.

3. Stakeholders

Stakeholder	Main Responsibilities	System Value
Department Heads	Create budgets, submit requests, respond to returns, monitor status.	Clear planning process and feedback visibility.
Budget Approvers	Review budgets, approve, return, compare, and challenge items.	Better decision support and controlled approval actions.

Stakeholder	Main Responsibilities	System Value
Finance Leadership	Monitor budget status, risk, controls, and financial exposure.	Stronger oversight and governance.
Procurement / Purchasing	Link purchase orders and support procurement visibility.	Clear relationship between purchasing activity and budgets.
Administrators	Manage users, roles, permissions, financial years, categories, and mappings.	Controlled configuration and access governance.
CFO	Oversee financial discipline, risk, accountability, and executive reporting.	Strategic visibility and audit-ready control.

4. Financial Year Governance

Financial year status is one of the strongest controls in the system. It defines when departments can plan, when approvals must be complete, and when the year can be closed.

Status	Purpose	Allowed Actions	Restricted Actions	Business Value
OPEN	Active planning and approval period.	Create budgets, edit drafts, submit budgets, approve budgets.	Closure is not yet final.	Enables active annual planning under control.
PRE-CLOSING	Closure preparation period.	Resolve final pending items and prepare for closure.	New open-ended budget activity is restricted.	Ensures unresolved approvals, transfers, and PO links are addressed.
CLOSED	Finalized financial year.	Historical visibility and reporting.	New budget changes and active workflow activity are restricted.	Preserves approved financial history and supports audit.

Lifecycle Control

```
Budgets Submitted and Approved
↓
All Required Items Resolved
↓
Pre-Closing
↓
No Pending Transfers or PO Links
↓
Closed
```

5. Budget Creation

Purpose

Budget creation allows departments to plan annual needs in a structured and controlled way.

Workflow

```
Department Head
↓
Open Current Budget
↓
Add Budget Items
↓
Enter Quantity and Unit Price
↓
Review Total Amount
↓
Submit for Approval
```

Business Value

- Standardizes budget planning across departments.
- Ensures budget requests are tied to the correct financial year.
- Uses configured categories and item types to improve consistency.
- Gives departments clear ownership of submitted requests.

Example

Radiology prepares a budget item:

Field	Value
Item	Ultrasound Machine
Quantity	2
Unit Price	SAR 180,000

Field	Value
Total Budget Request	SAR 360,000

The item becomes part of Radiology's annual budget submission and enters the approval workflow.

6. Budget Approval

Purpose

Budget approval ensures that department budget requests are reviewed before they become approved financial plans.

Workflow

```
Submitted Budget
↓
Approval Queue
↓
Item Review
↓
Price Intelligence Review
↓
Approve or Return
```

Business Value

- Creates a formal review gate before budget approval.
- Gives approvers visibility into quantities, unit prices, totals, and benchmarks.
- Supports consistent treatment of department submissions.
- Preserves approval decisions for governance and audit.

Example

An approver reviews:

Item	Quantity	Budget Unit Price	Historical Benchmark	Status
Office Chair	50	SAR 420	SAR 390	Review Price

The approver can approve if justified or return the budget for clarification.

7. Return & Feedback

Purpose

Return and feedback allow approvers to request changes or clarification without losing workflow control.

Workflow

```
Approver Reviews Budget
↓
Identifies Issue
↓
Returns Budget with Feedback
↓
Department Revises
↓
Department Resubmits
↓
Approver Reviews Again
```

Business Value

- Converts informal review comments into documented feedback.
- Gives departments clear correction instructions.
- Preserves the reason for return.
- Improves auditability of approval decisions.

Example

An approver returns a budget with the note:

Laptop unit price is 22% above historical benchmark. Please confirm specification or revise pricing.

The department can revise and resubmit with a clear understanding of the issue.

8. Budget Transfers

Budget transfers allow approved budget value to move between items when operational needs change.

Workflow

```
Source Budget Item
↓
Transfer Request
↓
Approval Review
↓
Destination Budget Item
↓
Balances Updated
```

Amount Example

Item	Before Transfer	Transfer	After Transfer
Office Furniture	SAR 100,000	-SAR 20,000	SAR 80,000
Medical Equipment	SAR 300,000	+SAR 20,000	SAR 320,000

Business Value

- Provides flexibility while preserving Finance oversight.
- Prevents informal reallocations outside approval control.
- Creates traceability for why balances moved.
- Supports changing operational priorities without weakening governance.

9. Purchase Order Linking

Purpose

Purchase Order Linking connects procurement activity to approved budget items.

Workflow

Financial Example

Measure	Amount
Approved Budget	SAR 100,000
Linked PO	SAR 30,000
Consumed Budget	SAR 30,000
Remaining Budget	SAR 70,000

Business Value

- Makes procurement activity visible against approved budgets.
- Helps Finance understand how approved budgets are being used.
- Supports closure control by identifying unfinished PO link activity.
- Improves transparency between Budgeting and Procurement.

10. PO Item Mapping

Purpose

PO Item Mapping connects budget item types to procurement item codes from historical purchase records.

Mapping Process

Example

Budget Item Type	Mapped Procurement Item Code	Result
Laptop	17819	Historical laptop purchase records support future laptop benchmarking.
Office Chair	2102030060	Chair purchase history supports approval review and PO suggestions.

Business Value

- Creates a reliable bridge between budgeting and procurement history.
- Supports suggested PO records during PO linking.
- Enables Price Intelligence by identifying comparable historical purchases.
- Allows Finance and administrators to maintain procurement knowledge over time.

11. Budget Consumption Tracking

Budget consumption tracking shows how approved budget value is being used.

Approved Budget
-

Consumed through PO Links
+ / -
Approved Transfers
=
Remaining Budget

Example

Measure	Amount
Approved Item Budget	SAR 250,000
Approved PO Links	SAR 90,000
Approved Transfer In	SAR 20,000
Available Budget	SAR 180,000

Business Value

- Shows whether approved budgets remain available.
- Helps prevent over-commitment.
- Connects planning decisions with purchasing activity.
- Supports stronger year-end review and closure.

12. Price Intelligence

Price Intelligence is a historical procurement benchmarking feature used during Budget Approval. It compares proposed budget unit prices against QNH's own historical purchasing behavior.

It does not use external market data in the current phase. It uses mapped procurement item codes and historical purchase records to create explainable benchmarks.

Price Intelligence Flow

Metric Reference

Historical Benchmark / Benchmark Price

Topic	Explanation
Definition	The typical historical unit price for comparable procurement records.
Calculation Logic	Median historical unit cost.
Business Meaning	Provides a stable reference point for whether a requested unit price appears reasonable.
Example	Historical prices: 90, 95, 100, 105, 500. Benchmark = 100.

Why median is used:

Average	Median
SAR 178	SAR 100

The SAR 500 outlier increases the average, but the median better represents typical historical purchasing behavior.

Median Historical Price

Topic	Explanation
Definition	The middle value after historical unit prices are sorted.
Calculation Logic	Sort prices from lowest to highest and select the middle value.
Business Meaning	Reduces the effect of unusual one-time purchases.
Example	90, 95, 100, 105, 500 -> median = 100.

Variance Amount

Topic	Explanation
Definition	Unit price difference between the requested budget price and the benchmark.
Calculation Logic	Budget Unit Price - Benchmark Price.
Business Meaning	Shows how much higher or lower the requested unit price is.
Example	SAR 420 - SAR 390 = SAR 30 above benchmark.

Variance %

Topic	Explanation
Definition	Percentage difference between requested unit price and benchmark.
Formula	$((\text{Budget Unit Price} - \text{Benchmark Price}) / \text{Benchmark Price}) \times 100.$

Topic	Explanation
Business Meaning	Normalizes price difference so items of different values can be compared.
Example	$((420 - 390) / 390) \times 100 = 7.7\%$.

Potential Impact

Topic	Explanation
Definition	Total financial difference across the requested quantity.
Formula	$(\text{Budget Unit Price} - \text{Benchmark Price}) \times \text{Quantity}$.
Business Meaning	Converts unit-price variance into total budget exposure.
Example	$(420 - 390) \times 50 = \text{SAR } 1,500$.

Potential Overspend

Topic	Explanation
Definition	Positive potential impact when the requested price is above benchmark.
Formula	$\max(0, \text{Budget Unit Price} - \text{Benchmark Price}) \times \text{Quantity}$.
Business Meaning	Highlights avoidable budget exposure if the benchmark is a valid reference.
Example	SAR 1,500 potential overspend for 50 chairs at SAR 30 above benchmark.

Evidence Strength

Topic	Explanation
Definition	A business indicator of how reliable the benchmark evidence is.
Calculation Logic	Based on available historical purchase count, supplier count, and recency of evidence.
Business Meaning	Helps approvers know whether the benchmark is strong or should be interpreted cautiously.
Example	37 purchases from 4 suppliers gives stronger evidence than 1 purchase from 1 supplier.

Status Interpretation

Status	Meaning	Recommended Action
Within Benchmark	Price is aligned with historical procurement behavior.	Review normally.
Review Price	Price is moderately above benchmark.	Check justification or specification.

Status	Meaning	Recommended Action
Significant Variance	Price is materially above benchmark.	Challenge price, specification, or supplier assumptions.
High Overspend Risk	Price is far above benchmark.	Require strong justification before approval.
No Benchmark Available	No usable mapped procurement history exists.	Use manual review and consider improving mappings.

CFO-Friendly Example

Field	Value
Budget Item	Office Chair
Quantity	50
Budget Unit Price	SAR 420
Historical Benchmark	SAR 390
Unit Variance	SAR 30
Variance %	7.7%
Potential Overspend	SAR 1,500
Status	Review Price

Interpretation:

The item is not automatically rejected. The system highlights that approving the requested unit price may create SAR 1,500 of additional budget exposure compared with historical purchasing behavior.

13. Analytics

Purpose

Analytics supports deeper budget investigation beyond daily dashboards.

Users

User	Analytics Use
CFO	Review financial exposure, high-risk areas, and department patterns.
Finance Leadership	Compare budget submissions and identify outliers.
Approvers	Investigate departments, categories, item costs, and variances.
Department Directors	Understand department-level budget behavior.

Business Value

- Compares budgets across departments and periods.
- Supports investigation of cost patterns and outliers.
- Helps Finance focus attention on areas needing review.
- Provides a foundation for smart analytics filters in the roadmap.

Examples

- Compare Radiology and Laboratory budget requests.
- Identify departments with large year-over-year increases.
- Review items with high benchmark variance.
- Explore budgets with missing procurement benchmarks.

14. Dashboards

Purpose

Dashboards provide role-based visibility into budget status, workload, and action requirements.

[SCREENSHOT: Budget Dashboard]

Users and Decisions Supported

User	Dashboard Visibility	Decisions Supported
Department Head	Budget status, returned items, action needs.	What needs revision or submission.
Approver	Pending budgets, transfers, PO links, workload.	What requires review.
CFO	Financial visibility, approval progress, risk indicators.	Where management attention is needed.
Administrator	Access and configuration-related activity.	Where governance setup is required.

Business Value

- Reduces dependency on manual follow-up.
- Makes pending work visible.
- Helps leaders identify bottlenecks.
- Supports quicker action on approvals, transfers, and PO links.

[SCREENSHOT: Approval Workload Dashboard]

15. Reporting Framework

Reporting is separate from analytics. Analytics supports exploration; reporting supports formal review, management packs, and audit evidence.

Current status: the reports area exists as a foundation, while the advanced reporting framework is a planned enhancement.

Report Category	Users	Decisions Supported	Business Value
Budget Status Reports	CFO, Finance, Department Heads	Which budgets are draft, returned, pending, or approved.	Improves lifecycle visibility.
Department Reports	CFO, Finance Leadership, Directors	Department budget allocation and progress.	Supports department accountability.
Approval Reports	CFO, Approvers, Auditors	Approval workload, decisions, and turnaround.	Supports governance monitoring.
Transfer Reports	Finance, Approvers, Auditors	Balance movement between budget items.	Explains approved reallocations.
PO Linking Reports	Finance, Procurement, Auditors	PO activity connected to budget items.	Improves procurement transparency.
Consumption Reports	CFO, Finance, Department Heads	Approved, consumed, and remaining budget.	Supports budget control.
Price Intelligence Reports	CFO, Approvers, Procurement	Variance, missing benchmarks, and overspend risk.	Supports evidence-based review.
Audit Reports	Auditors, Admins, Finance Leadership	User actions and governance evidence.	Supports audit readiness.
Executive Reports	CFO, Hospital Executives	High-level financial position and key risks.	Supports leadership decisions.

16. Email Notifications

Email notifications help ensure that the right stakeholders know when action is needed.

Trigger	Primary Recipient	Business Purpose
Budget Submitted	Budget Approvers	Notify reviewers that a department budget is ready for approval.
Budget Approved	Budget Owner / Department	Confirm the budget has been approved.
Budget Returned	Budget Owner / Department	Notify the department that revisions or clarification are required.
Transfer Submitted	Transfer Approvers	Request approval for balance movement.

Trigger	Primary Recipient	Business Purpose
Transfer Approved	Transfer Requester	Confirm transfer approval and balance impact.
Transfer Rejected	Transfer Requester	Communicate that transfer was not accepted.
PO Link Submitted	PO Link Approvers	Notify approvers that a PO link requires review.
PO Link Approved	PO Link Requester	Confirm approved procurement linkage.
PO Link Rejected	PO Link Requester	Communicate rejected PO link and reason.
Financial Year Opened	Relevant Users	Notify users that the new planning cycle is available.

Business value:

- Reduces manual follow-up.
- Speeds up workflow response.
- Helps users act at the right time.
- Improves accountability across departments and Finance.

17. Security & Permissions

Security is based on business responsibilities. Users are granted access according to what they need to view, edit, approve, or administer.

Role / Responsibility	Typical Capabilities
Department Head	View department budget, create/edit budget, submit budget, view feedback.
Budget Approver	View pending budgets, approve budgets, return budgets, access analytics.
Transfer Approver	Review and approve or reject budget transfer requests.
PO Link Requester	Submit PO links for approved budget items.
PO Link Approver	Approve or reject PO link requests.
Administrator	Manage users, roles, permissions, categories, mappings, and financial years.
Report Viewer	Access budget and governance reporting.

Governance Value

- Enforces segregation of duties.
- Limits sensitive actions to authorized users.
- Ensures approvals are performed by designated roles.
- Supports accountability for configuration and access management.

18. Audit & Governance

Audit and governance features preserve evidence of important decisions and workflow actions.

What Is Tracked

- Financial year creation, pre-closing, and closure.
- Budget creation, submission, approval, and return.
- Budget transfer creation, approval, and rejection.
- PO link creation, approval, and rejection.
- Item request activity.
- Access and administrative actions.

Example Scenarios

Scenario	Governance Question Answered
Budget returned for revision	Who returned it, when, and why?
Transfer approved	Who approved the transfer and what balance changed?
PO link approved	Which PO was linked to which budget item?
Financial year closed	Were required workflows resolved before closure?
Access changed	Who had permission to perform key actions?

Business Value

- Supports internal and external audit review.
- Reduces reliance on informal records.
- Preserves accountability for financial decisions.
- Helps Finance explain historical budget changes.

19. Benefits

Department Heads

Outcome	Benefit
Structured Budget Planning	Easier budget entry and fewer format inconsistencies.
Clear Status Visibility	Departments can see whether budgets are draft, returned, pending, or approved.
Actionable Feedback	Return notes make required corrections clear.
Better Budget Awareness	PO links and transfers make budget usage more transparent.

Approvers

Outcome	Benefit
Central Approval Queue	Faster identification of budgets requiring review.
Item-Level Detail	Better understanding of quantity, price, and total amount.
Price Intelligence	Stronger evidence for challenging or accepting prices.
Controlled Return Flow	Clear documentation of required changes.
Analytics	Better ability to compare departments and identify outliers.

CFO

Outcome	Benefit
Financial Visibility	Clearer view of approval status, budget exposure, and consumption.
Governance	Stronger approval, transfer, closure, and permission controls.
Procurement Transparency	PO activity becomes connected to approved budgets.
Overspend Risk Reduction	Benchmarking highlights high-variance items before approval.
Audit Readiness	Key actions are traceable and explainable.

20. Financial Control Improvements

Control Area	Improvement
Budget Control	Budgets are tied to financial years, departments, item types, and approval status.
Approval Discipline	Submitted budgets require approver action before final approval.
Return Discipline	Returned budgets include documented feedback and resubmission.
Transfer Control	Balance movement requires request and approval.
Procurement Control	PO links connect purchasing activity to approved budgets.
Consumption Visibility	Approved, consumed, transferred, and remaining values are visible.
Closure Control	Financial year closure considers unresolved approval, transfer, and PO link activity.

The result is a stronger control environment where budget changes and consumption are visible, governed, and explainable.

21. Transparency & Accountability

Before / After

Area	Before	After
Budget Status	Required manual follow-up.	Visible through dashboards and budget pages.
Approval Decisions	Could be difficult to reconstruct.	Approve and return actions are captured.
Feedback	Could be scattered across messages.	Return feedback is part of the workflow.
PO Consumption	Could be disconnected from budget items.	Linked POs show budget consumption.
Price Reasonableness	Depended on individual experience.	Benchmarks provide shared evidence.
Accountability	Depended on informal records.	Audit logs preserve key actions.

Business Impact

- Departments understand what Finance needs from them.
- Approvers have better evidence for decisions.
- Finance can explain budget movement and consumption.
- Executives gain confidence in the control environment.

22. Risk Reduction

Risk Type	Example Risk	System Control	Business Outcome
Financial Risk	Budgets approved without price context.	Price Intelligence and approval review.	Better challenge of high-variance requests.
Approval Risk	Budgets bypass formal review.	Approval workflow and permissions.	Stronger approval discipline.
Procurement Risk	PO usage not connected to budgets.	PO Linking and consumption tracking.	Better spend visibility.
Transfer Risk	Budget value moved informally.	Transfer request and approval workflow.	Controlled reallocations.
Closure Risk	Year closed with unresolved actions.	Financial year status and closure checks.	More reliable year-end governance.
Audit Risk	Decisions cannot be explained later.	Audit logs and workflow history.	Improved audit readiness.
Data Quality Risk	Historical procurement data not comparable.	PO Item Mapping.	Better benchmarking and PO suggestions.

23. Current Capabilities

Capability	Status	Business Value
Financial Year Management	Implemented	Controls the official budget planning and closure cycle.
Budget Creation	Implemented	Enables structured department budget preparation.
Budget Approval	Implemented	Provides formal review, approval, and return workflow.
Return & Feedback	Implemented	Documents revision requests and supports resubmission.
Budget Transfers	Implemented	Controls movement of budget value between items.
PO Linking	Implemented	Connects purchase orders to approved budget items.
PO Item Mapping	Implemented	Creates source-of-truth mapping for PO suggestions and benchmarking.
Budget Consumption Tracking	Implemented	Shows budget usage and remaining value through linked POs and transfers.
Price Intelligence	Implemented	Provides historical procurement benchmarks during approval.
Dashboards	Implemented	Gives role-based visibility into actions and status.
Budget Analytics	Implemented	Supports comparison and investigation of budget data.
Email Notifications	Implemented	Alerts users when workflow action is required.
Security & Permissions	Implemented	Enforces role-based access and segregation of duties.
Audit Logs	Implemented	Preserves traceability of key business actions.
Projects Visibility Foundation	Implemented / Partial	Shows project budget items and provides a foundation for future tracking.
Reporting Framework	Partial	Reports area exists; advanced report catalog is planned.
Companies / Vendors	Planned	Future supplier and multi-company visibility.
Smart Analytics Filters	Planned	Future easier exploration of Budget Analytics.
AI-Assisted Budget Discovery	Planned	Future executive intelligence capability, not current operation.

24. Roadmap

The roadmap should be understood as a controlled evolution of the current governance platform. Planned items should not be presented as already operational unless implemented.

Near-Term

Roadmap Item	Status	Purpose
Projects	Planned / Foundation Present	Provide elevated visibility for important budget items.
Companies / Vendors	Planned	Improve supplier visibility and support future multi-company governance.
Advanced Reporting	Planned	Provide formal operational, financial, executive, and audit reports.

Future Vision

Roadmap Item	Status	Purpose
Smart Analytics Filters	Planned	Let users filter analytics using business-language queries.
AI-Assisted Budget Discovery	Future Vision	Help users discover insights, clearly governed and not used as uncontrolled decision automation.
Executive Intelligence Enhancements	Future Vision	Expand dashboards, risk views, and procurement intelligence.
Additional Procurement Intelligence	Future Vision	Supplier benchmarking, market references, and historical benchmark snapshots.

25. Projects Roadmap

Status: Planned / Foundation Present

Business Definition

Project = Budget Item with elevated visibility and tracking.

Project does not mean full project management software.

Purpose

Some budget items represent important initiatives that need more executive visibility than standard items.

Examples:

- HIS Upgrade Project
- Patient Portal Phase 2
- PACS Migration
- MRI Expansion Project
- New Laboratory Setup

Current Direction

- Projects remain part of the budget process.

- Projects consume budget balances like other budget items.
- Projects participate in approval workflows.
- Projects belong to a department budget and financial year.
- Project name is represented by the budget item type.

Future Benefits

Benefit	Executive Value
Project Visibility	Important initiatives are easier to identify.
Project Reporting	Finance can report on strategic budget items separately.
Project Dashboards	Executives can monitor key initiatives.
Project Tracking	Future phases may add milestones, risks, documents, and procurement tracking.

26. Companies & Vendors Roadmap

Status: Planned

Purpose

Companies and vendor visibility would expand the platform's ability to analyze organizational and supplier-related budget activity.

Potential Business Benefits

Capability	Business Value
Supplier Spending Analysis	Understand how much budget and procurement activity goes to each supplier.
Vendor Concentration Reporting	Identify dependency on specific vendors.
Procurement Transparency	Make supplier relationships more visible to Finance and leadership.
Supplier-Based Budget Reporting	Support budget reviews by vendor or procurement category.
Strategic Sourcing Visibility	Support future sourcing and negotiation discussions.
Multi-Company Governance	Support company-specific data visibility and controls where required.

Executive Value

Vendor and company visibility would strengthen procurement governance and improve Finance's ability to monitor spend patterns across the organization.

27. Future Vision

The future direction should build on the current system without weakening governance or introducing unexplained decision-making.

Principles

- Keep financial controls explainable.
- Maintain permission-based access.
- Preserve auditability of decisions.
- Avoid presenting future capabilities as current operations.
- Use intelligence features to support decisions, not replace accountability.

Future Direction

Area	Future Opportunity
Smart Analytics Filters	Allow users to type business-language filters such as "approved radiology budgets above SAR 500,000".
Advanced Reporting	Create CFO-ready reports for status, consumption, price intelligence, PO links, transfers, and audit.
Procurement Intelligence	Expand from item benchmarks into supplier, trend, and market-reference analysis.
AI-Assisted Discovery	Future guided insight discovery, clearly governed and labeled as future capability.
Benchmark Snapshots	Preserve benchmark values shown at approval time for historical audit review.

28. Conclusion

QNH Budget Management System provides a strong foundation for hospital budget governance. It supports the full lifecycle from financial year opening to budget planning, approval, return feedback, transfers, PO linking, consumption tracking, analytics, reporting, notifications, permissions, and audit evidence.

The system improves financial control by making budget actions structured and traceable. It improves procurement visibility by connecting purchase orders to approved budget items. It improves decision support by showing historical procurement benchmarks during approval. It improves transparency by giving each stakeholder a clearer view of status, actions, and responsibilities.

For Finance Leadership and the CFO, the system provides:

- Stronger budget governance.
- Better approval discipline.
- Better visibility into budget consumption.
- Better procurement transparency.
- Better evidence for price review.
- Better audit readiness.
- A practical roadmap for future executive intelligence.

The strategic value is clear: the system helps QNH move from manual budget coordination toward controlled, transparent, evidence-based financial management.
