

Centralized Category Budget Workflow Walkthrough

This document explains the proposed workflow in simple language.

It is meant for discussion with department managers, Category Responsible users, CFO, developers, and other stakeholders.

It is not a technical design document. It does not explain database tables, APIs, or implementation details.

1. Introduction

The system is used to collect department budget needs, review them by the right specialist team, approve them financially, and then control execution through transfers and PO linking.

The main idea is simple:

```
Departments say what they need.  
Category Responsible users define the details and prices.  
CFO approves the final budget.  
Execution happens after approval.
```

Main roles:

- Department User
- Category Responsible
- CFO
- Execution users, including transfer and PO linking users

Why this workflow exists:

- Departments usually know what they need, but not the exact technical specification.
- IT, Biomedical, and General Responsible users can consolidate similar requests across departments.
- CFO needs clear quantities, pricing, notes, and documents before approval.
- Approved budgets need controlled changes, transfers, and PO linking.

2. Main Roles

Workflow Shape

```
Department User  
  |  
  v  
Category Responsible  
  |  
  v  
CFO  
  |
```

V Execution

Department User

The Department User enters the department need.

Example:

```
Item: Laptop  
Quantity: 5  
Distribution: Monthly
```

The Department User does not need to know:

- laptop model
- technical specification
- vendor
- unit price
- market price

Category Responsible

The Category Responsible reviews requests for one category.

Examples:

- IT Responsible reviews IT items.
- Biomedical Responsible reviews biomedical items.
- General Responsible reviews general items.

They decide the practical details:

- approved quantity
- technical option
- sub-items
- unit cost
- supporting documents
- recommendation notes

CFO

The CFO reviews the final package.

The CFO checks:

- requested quantity
- approved quantity
- total amount

- department breakdown
- sub-item breakdown
- notes
- attachments
- review history

The CFO approves or returns the package.

The CFO does not directly edit quantities, prices, or specifications.

Execution

Execution starts after the budget is approved and the financial year reaches the correct stage.

Execution includes:

- transfers
- PO linking
- financial year closing

3. Budget Categories

There are three fixed budget responsibility categories:

```
IT
Biomedical
General
```

Each item belongs to one category through the item master.

Examples:

```
Laptop          -> IT
Patient Monitor -> Biomedical
Office Chair    -> General
```

The user does not manually choose the category.

Example: Laboratory Department

Laboratory may submit requests in more than one category.

```
Laboratory Department

IT
- 5 Laptops
- 2 Printers
```

Biomedical
- 2 Patient Monitors

General
- 10 Chairs

If Laboratory has no General requests, it does not need to submit a General budget.

Laboratory Department

IT: Submitted
Biomedical: Submitted
General: Not Used

4. Department User Journey

The Department User starts by entering what the department needs.

Step 1: Open Budget Entry

[Budget Entry Screen]

Department: Laboratory
Financial Year: 2027

Step 2: Add Items

The user selects an item and enters quantity.

Item: Laptop
Quantity: 5
Distribution: Monthly

Another item:

Item: Printer
Quantity: 2
Distribution: Annual

The system knows both are IT items.

Laptop -> IT
Printer -> IT

Step 3: Review Category Budget

The user sees a simple list.

Laboratory IT Budget

Item	Quantity	Distribution
Laptop	5	Monthly
Printer	2	Annual

Step 4: Submit Category Budget

The user submits the IT budget.

Laboratory IT Budget
Status: Submitted to IT Responsible

The Biomedical and General budgets can remain draft or unused.

IT: Submitted
Biomedical: Draft
General: Not Used

5. Category Responsible Journey

The Category Responsible reviews requests immediately after a department submits.

They do not need to wait for all departments.

Example: IT Responsible Dashboard

IT Responsible View

Submitted IT Budgets

Department	Items	Status
------------	-------	--------

+-----+-----+-----+			
Laboratory	2 items	New	
Radiology	1 item	New	
ER	3 items	In Review	
+-----+-----+-----+			

Department View

The IT Responsible can view one department at a time.

Laboratory IT Budget			
+-----+-----+-----+			
Item	Requested	Approved	Notes
+-----+-----+-----+			
Laptop	5		
Printer	2		
+-----+-----+-----+			

Consolidated View

The IT Responsible can also see all departments together.

Laptop		
Total Requested: 50		
+-----+-----+		
Department	Quantity	
+-----+-----+		
Laboratory	5	
Radiology	15	
ER	30	
+-----+-----+		

This helps the responsible user think like this:

"The hospital needs 50 laptops total.
Maybe we can standardize the specification and estimate cost better."

Review Actions

The Category Responsible can:

- adjust approved quantity
- add notes

- mark item reviewed
- return item for modification
- create sub-items
- add pricing
- attach documents
- submit to CFO

Example:

Item: Laptop
Requested Quantity: 50
Approved Quantity: 45
Note: Reduced based on replacement schedule review.
Reviewed: Yes

6. Sub Item Example

Department users request a generic item.

Parent Item: Laptop
Requested Quantity: 50

The IT Responsible breaks this into detailed sub-items.

Parent Item: Laptop
Approved Quantity: 50

Sub Items

Sub Item	Quantity	Unit Cost	Total
Dell Latitude	30	4,500	135,000
HP EliteBook	15	4,200	63,000
Generic Laptop	5	4,000	20,000
Total	50		218,000

Visual calculation:

Dell Latitude
30 x 4,500 = 135,000

HP EliteBook

15 x 4,200 = 63,000

Generic Laptop

5 x 4,000 = 20,000

Laptop Total

135,000 + 63,000 + 20,000 = 218,000

Important rule:

Sub Item Quantities must equal Parent Approved Quantity.

30 + 15 + 5 = 50

Department users do not manage this section.

7. CFO Journey

The CFO receives the completed category package.

CFO Review Screen Example

CFO Review

Department: Laboratory

Category: IT

Status: Submitted by IT Responsible

Parent item view:

Item	Requested	Approved	Total
Laptop	50	50	218,000
Printer	5	5	18,000

CFO Opens Laptop Details

Laptop

Requested Quantity: 50
Approved Quantity: 50
Total Amount: 218,000

Department breakdown:

Department	Quantity
Laboratory	5
Radiology	15
ER	30

Sub-item breakdown:

Sub Item	Quantity	Unit Cost	Total
Dell Latitude	30	4,500	135,000
HP EliteBook	15	4,200	63,000
Generic Laptop	5	4,000	20,000

Notes:

IT Recommendation:
Standardize laptops into two main specifications.
Use generic laptops only for non-clinical shared workstations.

 - HP EliteBook Comparison.xlsx
 - Vendor Quotation.pdf

CFO Decision

The CFO can approve reviewed items.

```
Laptop: Approved
Printer: Returned for clarification
```

But the category is not final until all active items are resolved.

```
IT Category Status: CFO Review In Progress
```

8. Returned Budget Example

Example:

```
10 items submitted
7 items accepted
3 items need changes
```

CFO Review Result

Item	CFO Decision
Laptop	Approved
Printer	Approved
Network Switch	Approved
Monitor	Approved
Scanner	Approved
Tablet	Approved
UPS	Approved
Software	Returned
Router	Returned
Projector	Returned

The CFO returns the problem items to the Category Responsible.

```
CFO
-> IT Responsible
```

The IT Responsible decides whether the department must update anything.

If department input is needed:

IT Responsible
-> Department User

What Department User Sees

The user sees all 10 items, but only 3 are editable.

Laboratory IT Budget Returned			
Item	Status	Editable?	
Laptop	Accepted	No	
Printer	Accepted	No	
Network Switch	Accepted	No	
Monitor	Accepted	No	
Scanner	Accepted	No	
Tablet	Accepted	No	
UPS	Accepted	No	
Software	Returned	Yes	
Router	Returned	Yes	
Projector	Returned	Yes	

The accepted items are visible but read-only.

The returned items can be corrected and resubmitted.

9. Complete End-to-End Example

This example follows Laboratory Department from budget entry to financial year close.

Step 1: Financial Year Opens

Financial Year 2027
Status: OPEN

Departments can start entering budgets.

Step 2: Laboratory Creates IT Budget

Laboratory opens the IT budget section.

Laboratory Department
Category: IT
Status: Draft

Step 3: Laboratory Adds Laptops

Item: Laptop
Quantity: 50
Distribution: Monthly

Laboratory also adds printers.

Item: Printer
Quantity: 5
Distribution: Annual

Step 4: Laboratory Submits IT Budget

Laboratory IT Budget
Status: Submitted to IT Responsible

Step 5: IT Responsible Reviews

IT Responsible sees Laboratory's submission.

Laboratory IT Budget

+-----+-----+-----+			
Item	Requested	Approved	
+-----+-----+-----+			
Laptop	50		
Printer	5		
+-----+-----+-----+			

IT Responsible reviews the laptop request.

Laptop
Requested: 50
Approved: 50
Reviewed: Yes

Step 6: IT Responsible Creates Sub-Items

Laptop Sub Items

+-----+	+-----+	+-----+	+-----+	+-----+
Sub Item	Quantity	Unit Cost	Total	
+-----+	+-----+	+-----+	+-----+	+-----+
Dell Latitude	30	4,500	135,000	
HP EliteBook	15	4,200	63,000	
Generic Laptop	5	4,000	20,000	
+-----+	+-----+	+-----+	+-----+	+-----+
Total	50		218,000	
+-----+	+-----+	+-----+	+-----+	+-----+

Step 7: IT Responsible Adds Supporting Documents

Parent item documents:

- Laptop Consolidation Analysis.pdf
- IT Technical Recommendation.pdf

Sub-item documents:

- Dell Latitude Specification.pdf
- HP EliteBook Comparison.xlsx
- Vendor Quotation.pdf

Step 8: IT Responsible Submits to CFO

Laboratory IT Budget
Status: Submitted to CFO

Step 9: CFO Reviews

CFO sees:

Parent Item: Laptop
Requested Quantity: 50
Approved Quantity: 50
Total Amount: 218,000

CFO also sees:

- Department breakdown
- Sub-item breakdown
- Notes
- Attachments
- Review history

Step 10: CFO Returns One Item

CFO approves Laptop but returns Printer.

Laptop: Approved
Printer: Returned

The category is not final yet.

IT Category Status: CFO Review In Progress

Step 11: IT Responsible Modifies Printer

IT Responsible reviews CFO's note.

CFO Note:
Please confirm whether the requested printers are shared network printers or small desktop printers.

IT Responsible updates the printer sub-items and adds a note.

Printer Note:
Updated to shared network printers based on department use.

Step 12: IT Responsible Resubmits to CFO

Printer
Status: Resubmitted to CFO

Step 13: CFO Approves

CFO approves Printer.

```
Laptop: Approved  
Printer: Approved
```

Now all active items are approved.

```
Laboratory IT Budget  
Status: CFO Approved
```

Step 14: Change Request Before PRE-CLOSING

Before **PRE_CLOSING**, Laboratory realizes it needs 5 more laptops.

The department cannot directly edit the approved item.

It submits a change request.

```
Change Request  
Item: Laptop  
Request: Increase quantity from 50 to 55  
Reason: New outpatient clinic expansion
```

Flow:

```
Department User  
-> IT Responsible  
-> CFO
```

If accepted, only Laptop reopens.

Printer remains approved and locked.

Step 15: CFO Moves Financial Year to PRE-CLOSING

Once budgeting is complete:

```
Financial Year 2027  
Status: PRE_CLOSING
```

At this point:

- normal budget editing stops
- new normal change requests stop
- transfers can begin

- PO linking can begin

Step 16: Transfer Example

Only Category Responsible users create transfers.

Example:

IT Responsible creates transfer

From: Printer

To: Laptop

Amount: 10,000

Reason: Printer savings moved to laptop shortage

CFO reviews:

Transfer Request

Status: Pending CFO Approval

CFO approves or rejects.

Step 17: PO Linking Example

PO linking happens against sub-items.

Example:

Approved Parent Item:
Laptop

Approved Sub Item:
Dell Latitude
Quantity: 30

A PO line arrives:

PO Line:
Dell Latitude Laptop
Quantity: 10
Unit Cost: 4,450

The PO link targets:

Dell Latitude

not:

Laptop

This keeps procurement linked to the approved specification.

Step 18: Financial Year Closing

Before closing:

No pending transfers
No pending PO links

Then CFO can close the year.

Financial Year 2027
Status: CLOSED

10. Lifecycle Diagram

Final high-level workflow:

Return flow:

Simple summary:

Department asks.
Category Responsible prepares.
CF0 approves.
Execution consumes the approved budget.
